## MOTION FOR MECHANICAL ENGINEERING

We have been a competent partner in mechanical engineering since 1992. We have our expertise in mechanical and plant engineering, as well as in customer-specific solutions, logistics systems and printing machines.

Our team of employees has good, practical experience with a wide variety of machine technology and guarantees individual support for customers at Switzerland and foreign countries.

Our range of services also includes the implementation of complete projects with assembly, commissioning and machine relocation, as do retrofit solutions and remanufacturing to increase the lifecycle of your production systems. The ecological footprint determines our work.

At our location, assemblies of entire assemblies and machines are possible. The existing infrastructure also ensures safe and precise assembly of a heavyweight. Function test and test run can be carried out according to the order.

With the existing manufacturing network, continuous production of individual components or entire assemblies with the with the most modern manufacturing machines is possible.

## "MOVEMENT FOR YOUR PROJECT"

### ENGINEERING / REMANUFACTURING

We support you in the project and implementation from the preliminary study, utility value analysis to the specification. We work according to the EU Machinery Directive 2006 and carry out the complete engineering with risk assessment up to the CE marking. A cost and solution-oriented approach, as well as standard-compliant documentation is your advantage.

Our planning team with proven specialists will be happy to meet your requirements from mechanics, automation HW / SW and fluidics.

### CONSTRUCTION / AUTOMATION

With 3D CAD systems (SolidWorks) we create the project / production drawings and parts lists. The data exchange between design and manufacturing takes place via STEP FILE. Transparent test and release cycles allow efficient processing and reduce the error rate. In cooperation with Automation HW / SW, complete machines and production systems are realized. The control system is built in cooperation with partner companies.

### ASSEMBLY

The broad experience of our mechanics and electricians from various projects in Switzerland and foreign countries allows us to offer our assembly services in the entire machine industry. We carry out individual assemblies or complete production plants as new assembly, including relocation to new production locations, as a general contractor or as a service provider in a project community. We carry out the assembly planning, provide the assembly specialists and coordinate the transport logistics. Qualified technicians are available for automation and commissioning.

### RETROFIT / MAINTENANCE

We would be proud to develop preventive maintenance concepts and ensure that the maintenance intervals are carried out with our specialists. For new demands we offer you our experience in retrofit solutions with current and adapted technology.
